APPENDIX:

The Appendix includes the following item(s):

☒ - a new or amended Abstract of the Disclosure

APPENDIX:

ABSTRACT OF THE DISCLOSURE

A process and device for storing and accessing data in databases of a computerized travel reservation system. According to the invention:

    - for each type of information to be stored, there are created rules associating:

        • a set of criteria defining the trips to which the information applies,

        • a content representing the value of the information to be applied;

    - the set of criteria of a rule includes a pair of markets with a market of origin that is defined by the geographical zone of departure on the trip and a destination market which is defined by the geographical zone of arrival of the trip,

        - the defined markets are stored in a database,

        - the rules created are stored in a database.
